

MSD PRO-CRIMP TOOL

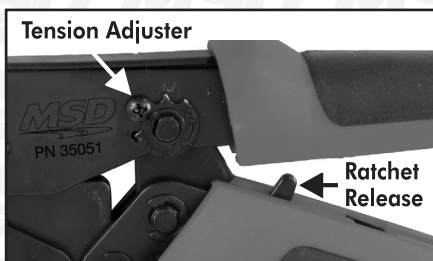

ASSEMBLY

Insert the dies into the jaws of the Pro-Crimp Tool but do not tighten the screws. Fully close the jaws of the Tool to align the dies then tighten the screws.

TENSION ADJUSTMENTS

The MSD Pro-Crimp Tool features an adjustment that allows you to set the amount of tension felt at the end of a crimp. To adjust the tension:

1. Remove the Phillips screw located to the right of the MSD logo.
2. Move the adjuster to the desired location. There is a (+) symbol for more tension and a (-) for less.
3. Install the screw to lock the adjustment in place.

RATCHET RELEASE

If it is ever required to release the Pro-Crimp in the middle of a crimp, simply push the ratchet release lever forward.

ADDITIONAL CRIMP DIES

MSD offers additional crimp dies to be used with the Pro-Crimp Tool. The supplied dies are designed specifically for MSD's Dual Crimp Terminals for spark plug wires. Additional dies are sold separately.
